OUTLINE:

1. Problem Statement
2. Proposed Solution
3. System Development Approach
4. Results & Insights
5. Conclusion
6. Future Scope
7. References

PROBLEM STATEMENT:

Quick commerce platforms generate large amounts of sales data from multiple outlets, products, and customer transactions.

Without proper analysis it becomes difficult to:

- Identify top performing product categories
- Evaluate outlet performance
- Understand customer demand patterns
- Track overall sales performance

Therefore, a data-driven dashboard is required to analyze sales performance and generate meaningful insights.

PROPOSED SOLUTION:

The proposed solution is to develop an interactive sales analysis dashboard using Microsoft Power BI.

The dashboard helps visualize key business metrics such as:

- Total Sales
- Average Sales
- Number of Items Sold
- Customer Ratings

Interactive filters allow users to explore data based on outlet size, location, and product categories.

SYSTEM APPROACH:

Tools Used:

- Microsoft Power BI
- Power Query for Data Cleaning
- DAX for Calculations

Development Steps:

1. Data Collection
2. Data Cleaning & Transformation
3. Data Modeling
4. Dashboard Visualization
5. Insight Generation

Data Cleaning & Processing

The dataset contained approximately 8,500 rows and 12 columns.

Data preparation steps included:

- Standardizing inconsistent values in the Item Fat Content column
- Converting raw dataset into an Excel Table (Ctrl + T)
- Creating a Serial Number column to count total items
- Checking for missing values and inconsistencies
- Preparing data for Pivot Table analysis

RESULT:

Key Insights from the Analysis:

- Total Sales reached approximately $1.20M
- Average Sales per item is $141
- Snack foods and fruits are the top-selling categories
- Medium-sized outlets generate the highest sales
- Tier 2 cities show strong demand for quick commerce

CONCLUSION:

The Blinkit Sales Analysis Dashboard demonstrates how Power BI can transform raw sales data into meaningful business insights.

The dashboard helps stakeholders understand:

- Sales trends
- Product performance
- Outlet efficiency
- Customer preferences

This enables better data-driven business decisions.

FUTURE SCOPE:

The project can be further enhanced by:

- Integrating real-time sales data
- Using advanced analytics for sales prediction
- Expanding analysis to include customer behavior
- Developing dashboards using AI-based insights
